

# AirBnB Research Proposal

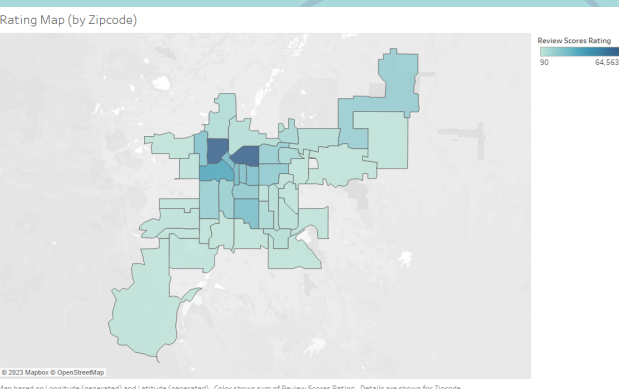

1

What are the top keywords mentioned in the textual reviews?

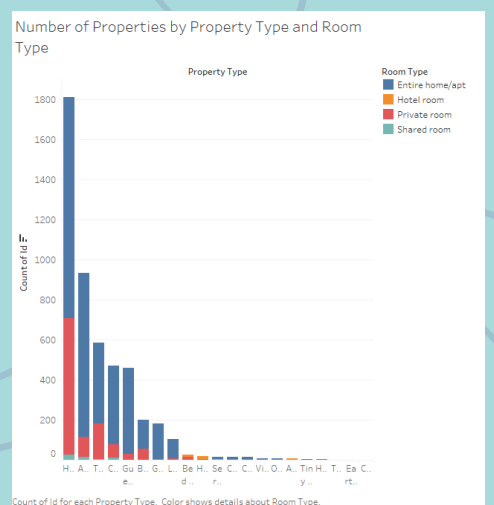

2

How do the top keywords vary among property and room types?

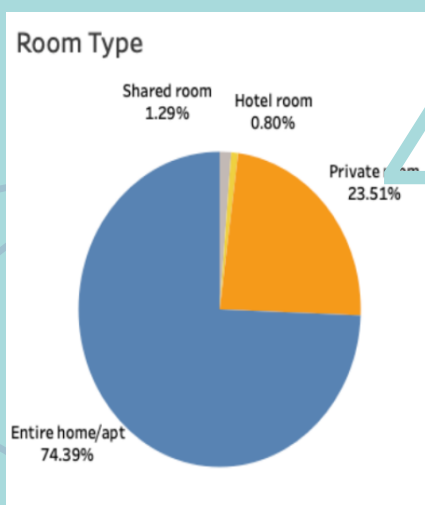

3

Overall sentiment of all textual reviews? Sentiment by topic?

4

How does sentiment vary across different neighborhoods?

5

What topics are mentioned, and what keywords make up these topics?

6

Can we accurately use textual reviews to predict the price per day?

# Variables

Variable	Description	Type
id	ID of the listing	Continuous, integer
listing_url	Url of the listing	Nominal, text string
name	Name - of the renting house/room	Nominal, text string
summary	Summary of the place	Nominal, text string
experiences_offered	*(could be removed) - Whether the listing also offers other traveling experiences	Nominal, text string
	*(should be binary)	
interaction	The host's desired way of interaction	Nominal, text string
house_rules	House rules	Nominal, text string
host_id	The ID number of the host	Continuous, integer
host_name	Name of the host	Nominal, text string
host_since	Since when the host has been hosting	Continuous, integer *(should be date)
host_response_time	Host response time	Nominal, text string
host_is_super_host	Whether or not the host is a super host	Nominal, text string *(should be binary)
host_identity_verified	Whether or not the identity of the host is verified	Nominal, text string *(should be binary)
neighborhood	The neighborhood the house is at	Nominal, text string *(should be categorical)
zipcode	The zip code of the listing	Continuous, integer
property_type	The type of the property	Nominal, text string *(should be categorical)
room_type	The type of the room	Nominal, text string *(should be categorical)
accomodates	Number of accomodates	Continuous, integer
bathrooms	Number of bathrooms	Continuous, numeric
bedrooms	Number of bedrooms	Continuous, integer
beds	Number of beds	Continuous, integer
bed_type	Type of the bed	Nominal, text string
amenities	Available amenities	Nominal, text string
square_feet	Total size of the listing in square feet	Continuous, integer
price	The listing price per night	Continuous, decimal
weekly_price	The listing price per week	Nominal, text string *(should be continuous, integer/decimal)
monthly_price	The listing price per month	Nominal, text string *(should be continuous, integer/decimal)
cleaning_fee	The fee for cleaning	Nominal, text string *(should be continuous, integer/decimal)
minimum_nights	Number of minimum nights for each reservation	Continuous, integer
availability_365	Number of available days for the year	Continuous, integer
number_of_reviews	Number of reviews	Continuous, integer
first_review	First time the listing was reviewed	Continuous, integer *(should be date)
last_review	Last time the listing was reviewed	Continuous, integer *(should be date)
review_scores_rating	Overall rating of the listing	Continuous, integer
review_scores_accuracy	Average rating on accuracy	Continuous, integer
review_scores_cleanliness	Average rating on cleanliness	Continuous, integer
review_scores_checkin	Average rating on check-in	Continuous, integer
review_scores_communication	Average rating on communication	Continuous, integer
review_scores_location	Average rating on location	Continuous, integer
review_scores_value	Average rating on value	Continuous, integer
instant_bookable	Whether or not the listing supports instant booking	Nominal, text string *(should be binary)
cancellation_policy	The cancellation policy of the listing	Nominal, text string
calculated_host_listings_count	The number of house/rooms owned by the listing's host	Continuous, integer
reviews_per_month	Average number of reviews each month	Continuous, numeric
